

Easy to implement barcode based Stock Management System.

Built with knowledge collected from various clients use cases, our software systems come out-of-the-box ready to improve the way you do business.

Eliminate Manual Inventory Management Pains

- Helps in maintaining accurate stock, reduces human errors and avoid time-consuming manual entry of items, location bins, pick orders and inventory receiving. Real-time inventory reports allow you to compile and analyze essential data.
- Automatic low stock level notifications ensure you will never lose out on another sale due to stockouts. Set automatic re-order points down to each bin location as well as preferred vendors for each inventoried item

Steam line Ordering Process

- The software provides a critical, centralized process to control the management of ordering, receiving & inspecting of inventory items
- Automated Order system helps you to place the order automatically based on the re-order level which is already defined by you. If a particular item's stock is below the minimum stock level, you can place order just by clicking one button.

Purchase with a purpose

- Purchase order requisitions slips for inventory items are automatically generated based on the minimum stock levels.
- At the time of placing order, detail history of that items is displayed, which shows ready stock, last 3 months sale, last 12 months sale & total sale of that item till date. This helps to understand the requirement of the item & accordingly we can place the order.
- At the time of placing purchase order, sales order for that particular item is also displayed.

Drop Ship on Demand

- Picking an order and realize you don't have enough inventory on hand to fulfill it? We have solved the problem. With our software, you will be shown the detail stock of the item at the time of order. You will also have option to lock / free the order received qty for a particular customer.
