

OMSAcc

ERP for Shirt Accessories Industry.

- Category** wise Accessory Database.
- User can save **image / photograph** of the accessory.
- Accessory Purchase Inward System. At the time of data entry only, the user can specify the **location / rack details** of the goods to keep.
- Generate **Barcode Sticker** for every purchase.
- Printing of Labels / Barcodes.
- Generate delivery challan just by scanning barcode. Here after any product is scanned, the software makes sure that **FIFO method** is maintained, i.e. if the scanned product is newly purchased and any **old stock** of the same item is available, then the software will generate one alert, which will help the user to change and item, if required.
- Purchase order **requisitions slips** for inventory items are automatically generated based on the minimum stock levels.
- At the time of placing order, **detail history of that items** is displayed, which shows ready stock, last 3 months sale, last 12 months sale & total sale of that item till date. This helps to understand the requirement of the item & accordingly we can place the order.
- At the time of placing purchase order, sales order for that particular item is also displayed.
- Picking an order and realize you don't have **enough inventory** on hand to fulfill it? We have solved the problem. With our software, you will be shown the detail stock of the item at the time of order. You will also have option to **lock / freeze** the order received qty for a particular customer.
